

Next-Generation Ford Ranger

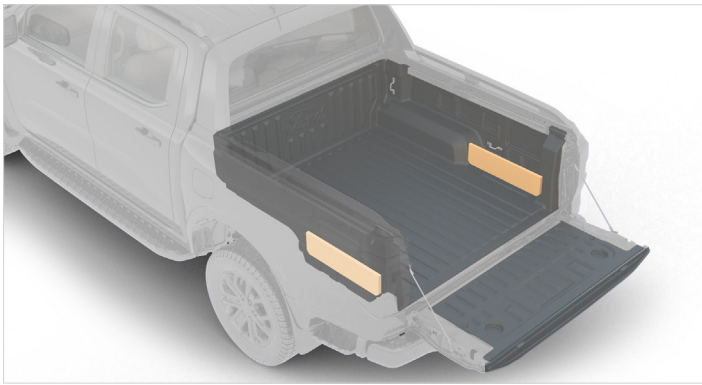

SHAPE YOUR SPACE, YOUR WAY

Wooden Partition Guide

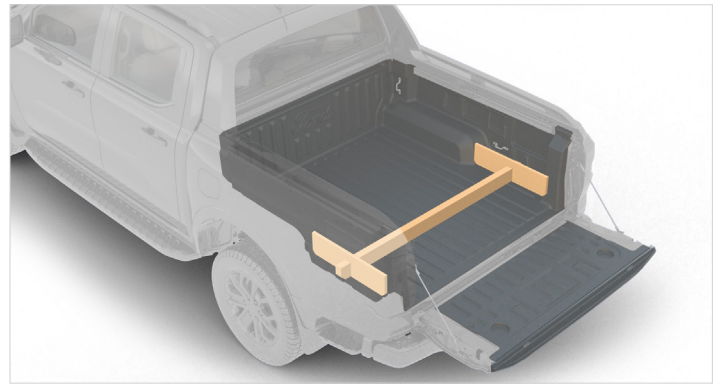

The Next-Gen Ranger's bedliner comes with functional divider locators that let you create custom compartments. You can use timber or MDF to partition the space using tough molded slots and shape it your way. These compartments help to firmly secure the luggage and manage them better.

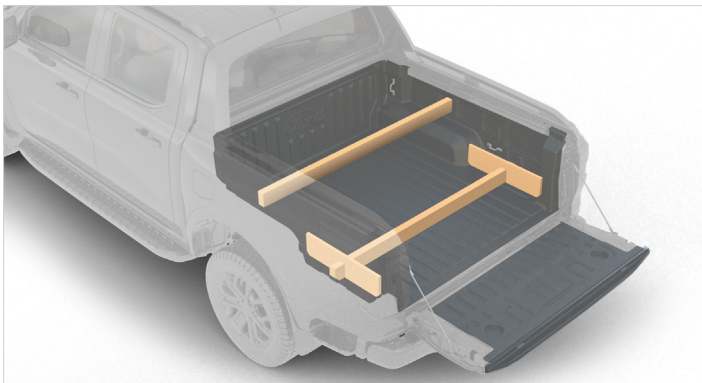

2 x Side Panel B

Secure small objects like bottles, ropes, garden tools etc. into the side pocket with the help of a side panel. It helps to prevent them from rattling around the bed and keeps them handy when in need.

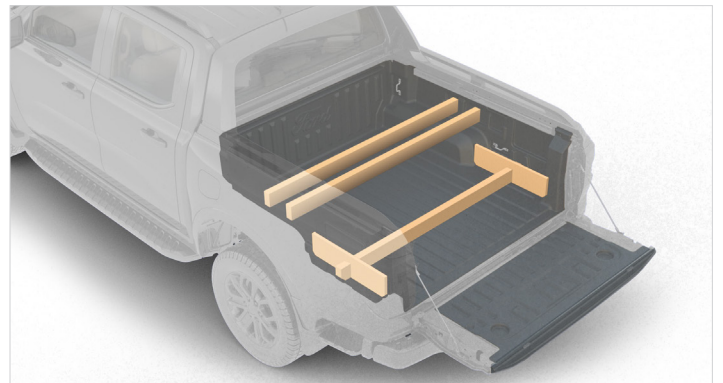

1 x Plank B 2 x Side Panel A

Divide the bed into two halves and secure your luggage in the back part for easy access. The divider also prevents the luggage from sliding around and getting damaged during the drive.

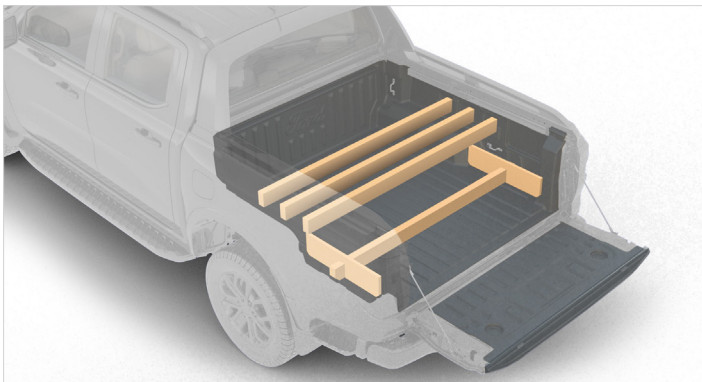

1 x Plank A 1 x Plank B 2 x Side Panel A

Raise the divider by putting a plank A on top mold. It helps to keep different types of luggage from mixing together. And Plank B prevents it from sliding.

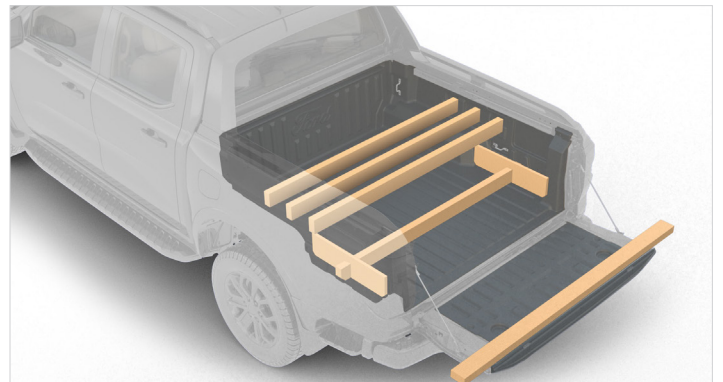

2 x Plank A 1 x Plank B 2 x Side Panel A

Extend the upper platform to secure luggage over it, also have space to slide cargo underneath. The Plank B prevents the cargo from rolling around.

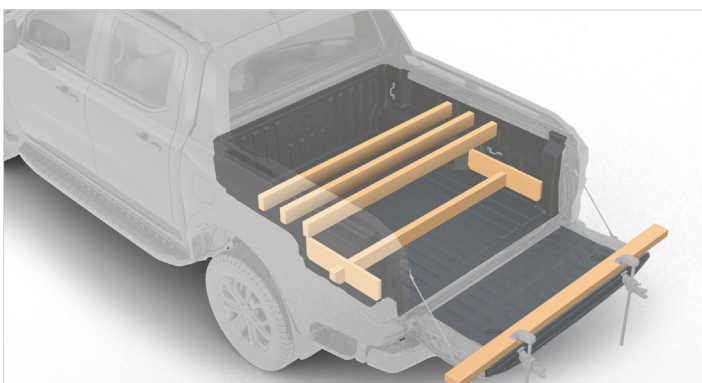

3 x Plank A 1 x Plank B 2 x Side Panel A

Extend the upper platform further to secure heavier luggage on it. Also, use the space underneath to store more cargo.

1 x Plank C

An integral ruler molded into the tailgate helps you to take the correct measurement without any fuss.

2 x Clamps

Turn your tailgate into a work platform with the measuring scales and the clamp pockets. The clamp pockets in the tailgate help you to firmly secure the items you are working on.
